

Computer Software & Windows 10

A Fun & Easy Guide for Grade 5!

Part 1:

What is Software?

The Dynamic Duo

Hardware

These are the physical parts of a computer that you can **see and touch!**

Examples include the keyboard, mouse, monitor, processor, and printer. They are the body of the computer.

Software

This is a set of instructions given to the computer to do a specific task. You **cannot touch it!**

It tells the hardware exactly what to do. Hardware cannot work without software.

Two Types of Software

1. System Software

Think of this as the **manager** of the computer.

It consists of programs that control and manage the overall working of the computer system. It works in the background so you can use your apps.

2. Application Software

Think of these as your **specialized tools**.

These are programs that help you do specific jobs, like typing a document, painting a picture, or playing an awesome game!

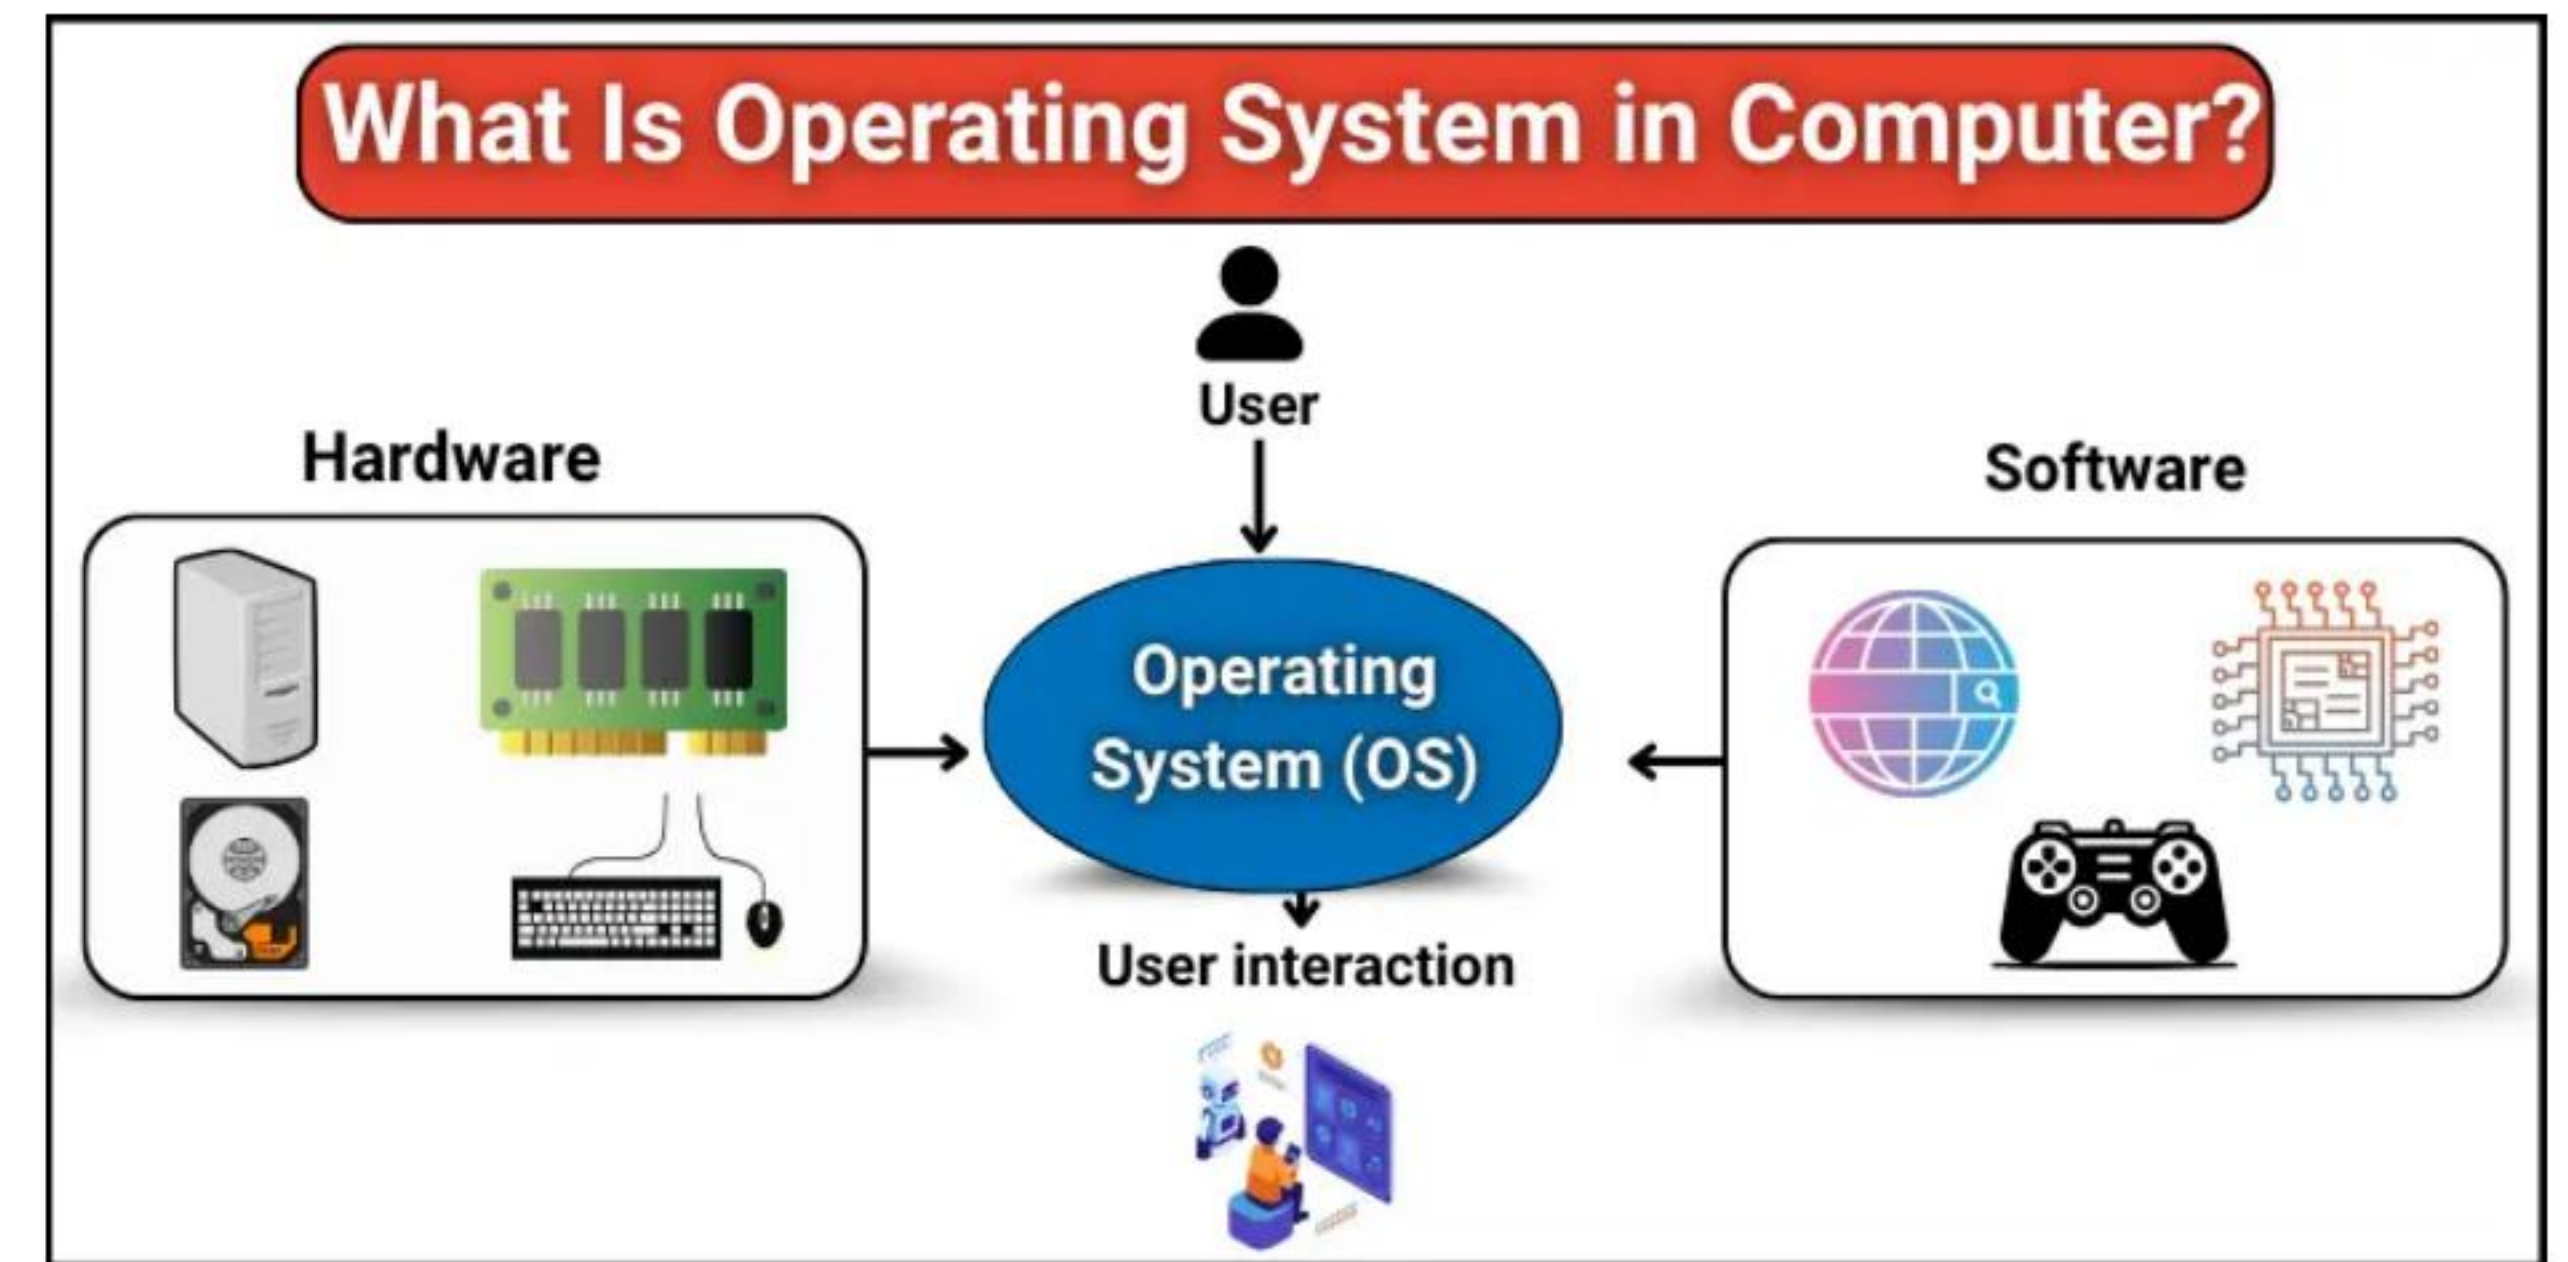

The Operating System (OS)

An Operating System is the **most important** system software! It is the big boss.

It manages the hardware and helps all your application software run smoothly.

Popular Examples:

Windows 10, Mac OS, and Linux.

Fun Application Software!

Word Processor

Helps you type text! You can write letters, stories, and poems.

Examples: MS Word, WordPad.

Spreadsheet

Helps you do calculations with numbers and display data in charts.

Examples: MS Excel, Lotus 123.

Presentation

Displays info in the form of slides with text, images, and audio!

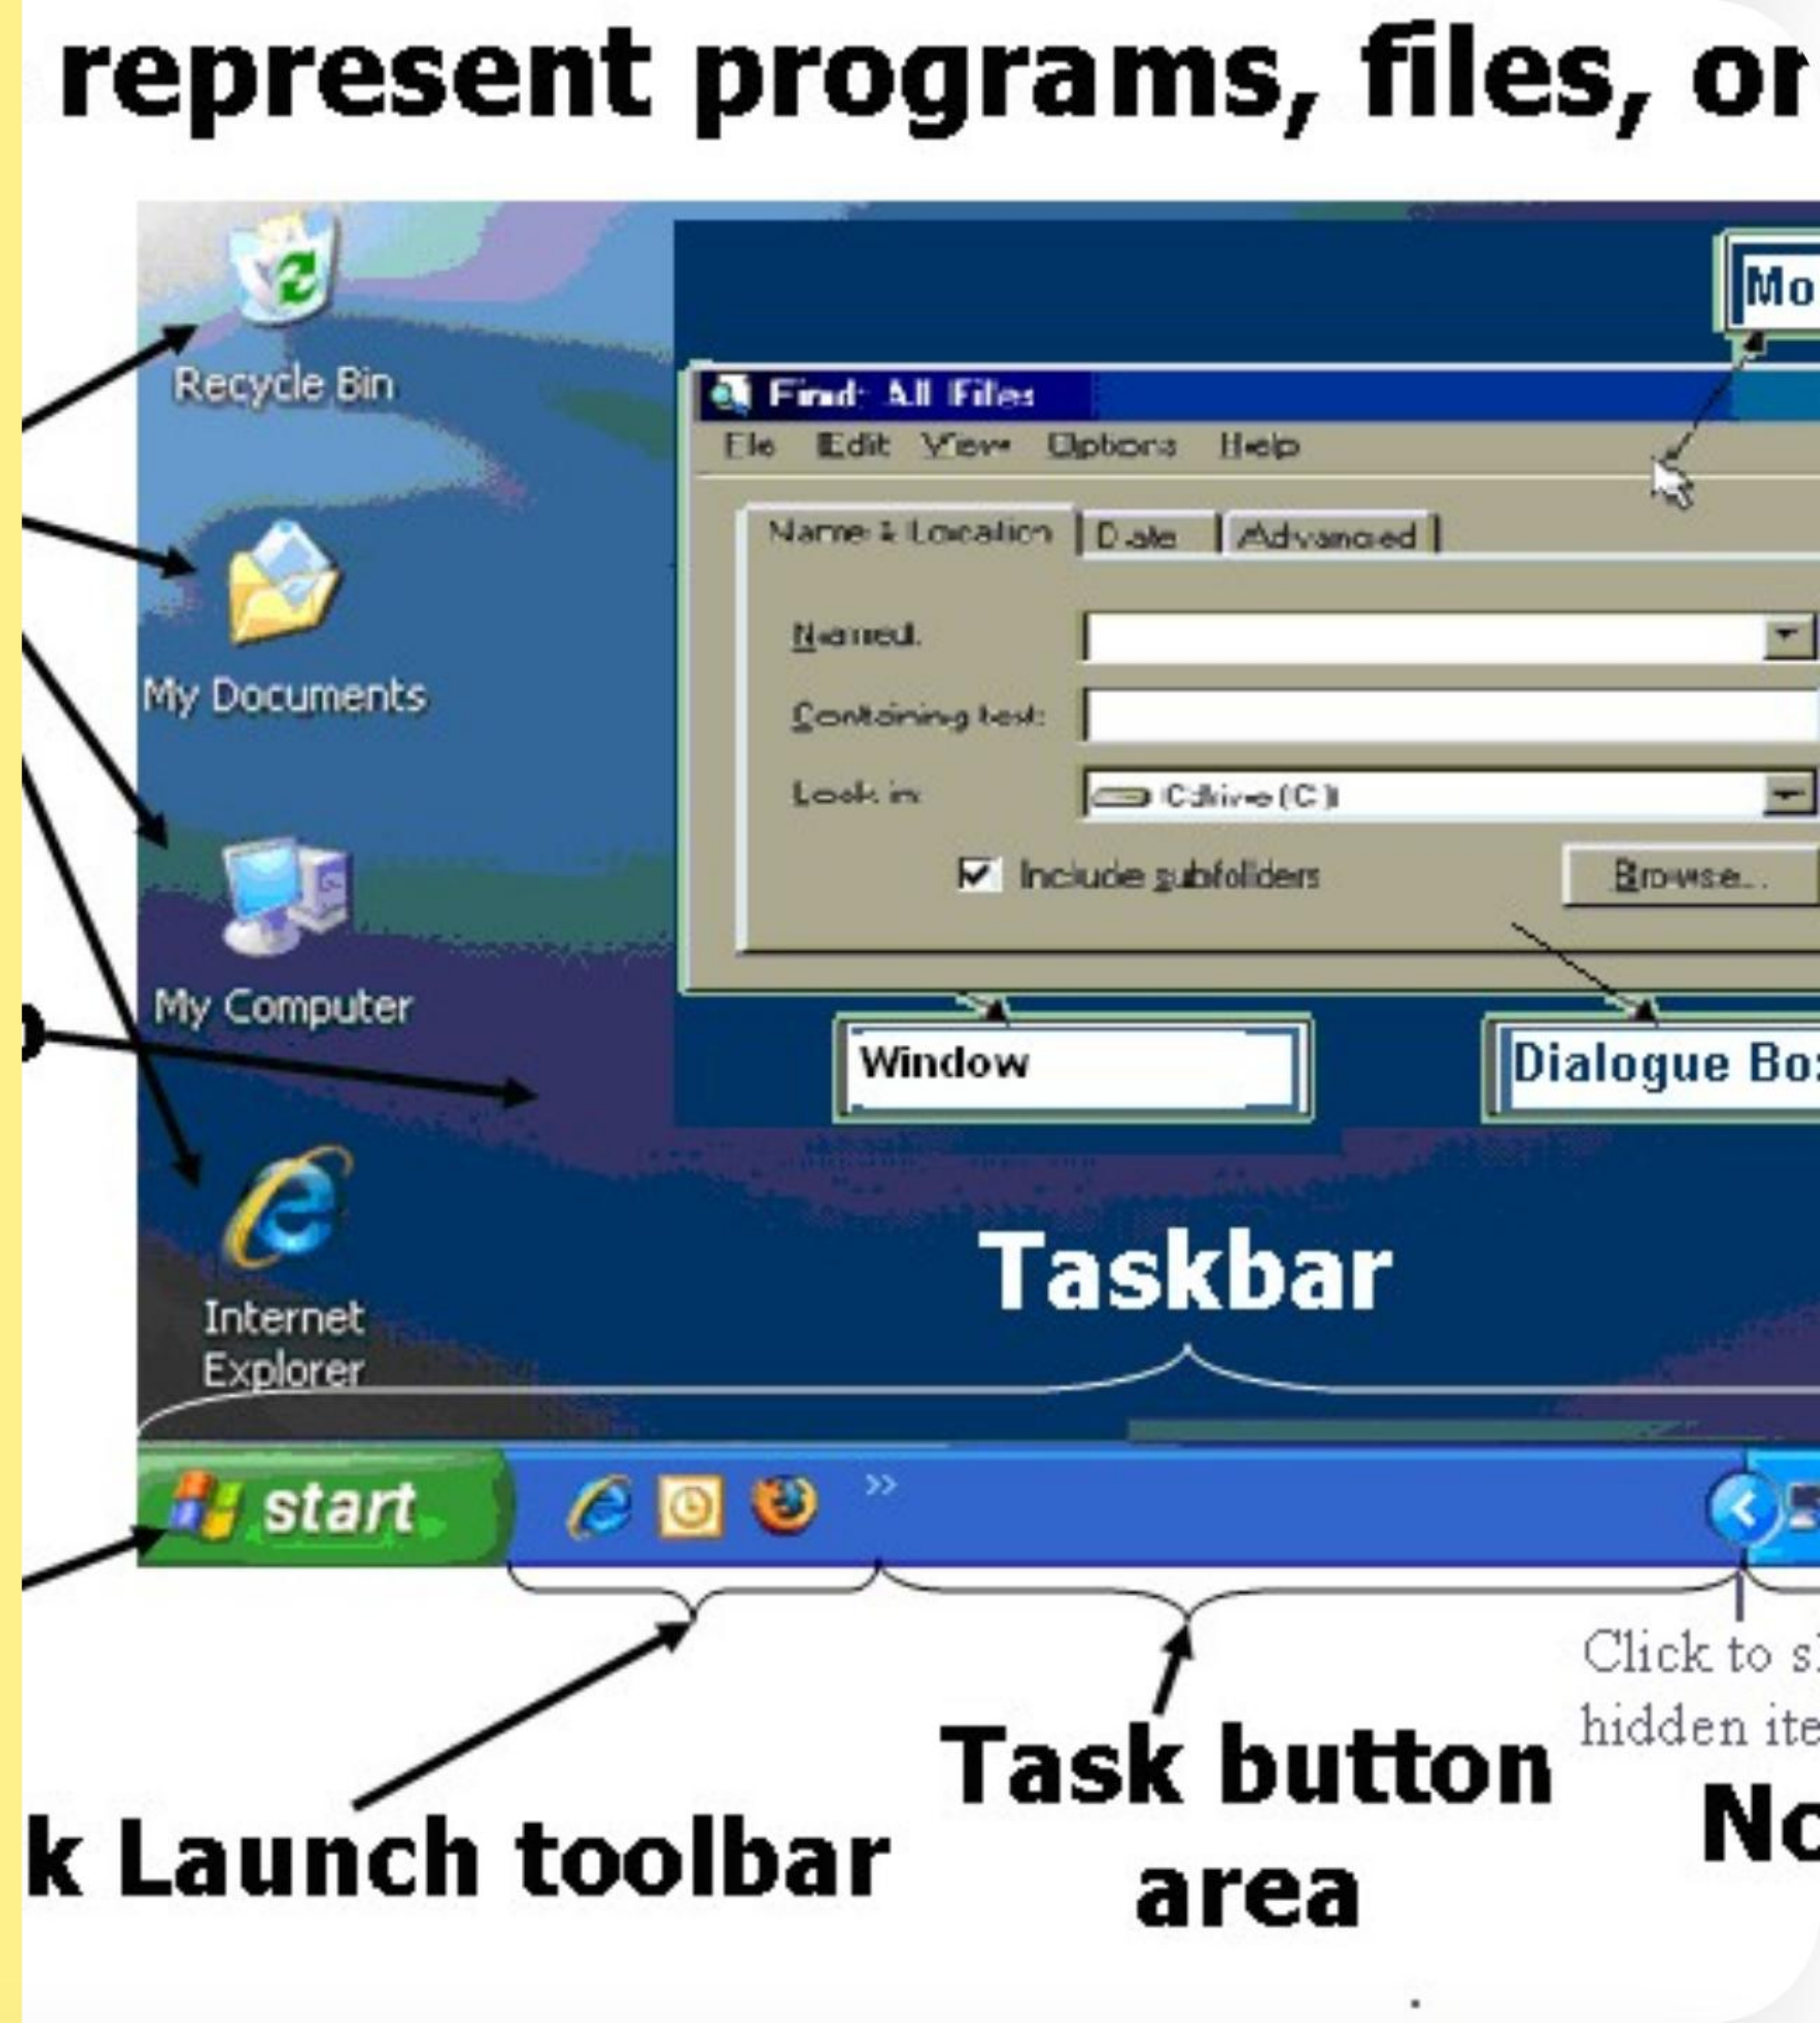

Examples: MS PowerPoint.

Part 2: Exploring Windows 10

The Desktop Screen

Windows 10 is an Operating System that uses a GUI (Graphical User Interface). That means you can click on pictures instead of typing long commands!

After you switch on a computer, the **very first screen** you see is called the **Desktop**. It holds all your shortcuts and the Taskbar.

The Taskbar

The Taskbar is the long bar located at the **bottom** of the home screen.

- ★ **Start Button:** Located on the extreme left. Click it to find all your programs!
- ★ **Quick Launch Area:** The middle portion. It shows programs currently open. You can pin apps here to open them fast.
- ★ **Notification Area:** On the right. Shows icons for internet connectivity, battery status, and the clock.
- ★ **Peek:** A tiny vertical rectangle on the extreme right. Press it to instantly hide windows and see your Desktop!

Important Desktop Icons

This PC

A shortcut to view all the drives, files, and folders saved on your entire computer system.

Shortcuts

Direct links to actual programs or folders. You can easily spot them because they have a **small jump arrow** on the corner!

Recycle Bin

Takes you to a folder where all deleted files go. It keeps them safe in case you deleted them by mistake.

Oops! Deleting & Restoring

Deleting Files

When you right-click a file and select **Delete**, it is not lost forever! It simply moves into the Recycle Bin.

To permanently delete it, you have to double-click the Recycle Bin and choose "Empty Recycle Bin".

Restoring Files

If you deleted a file by mistake, don't panic!

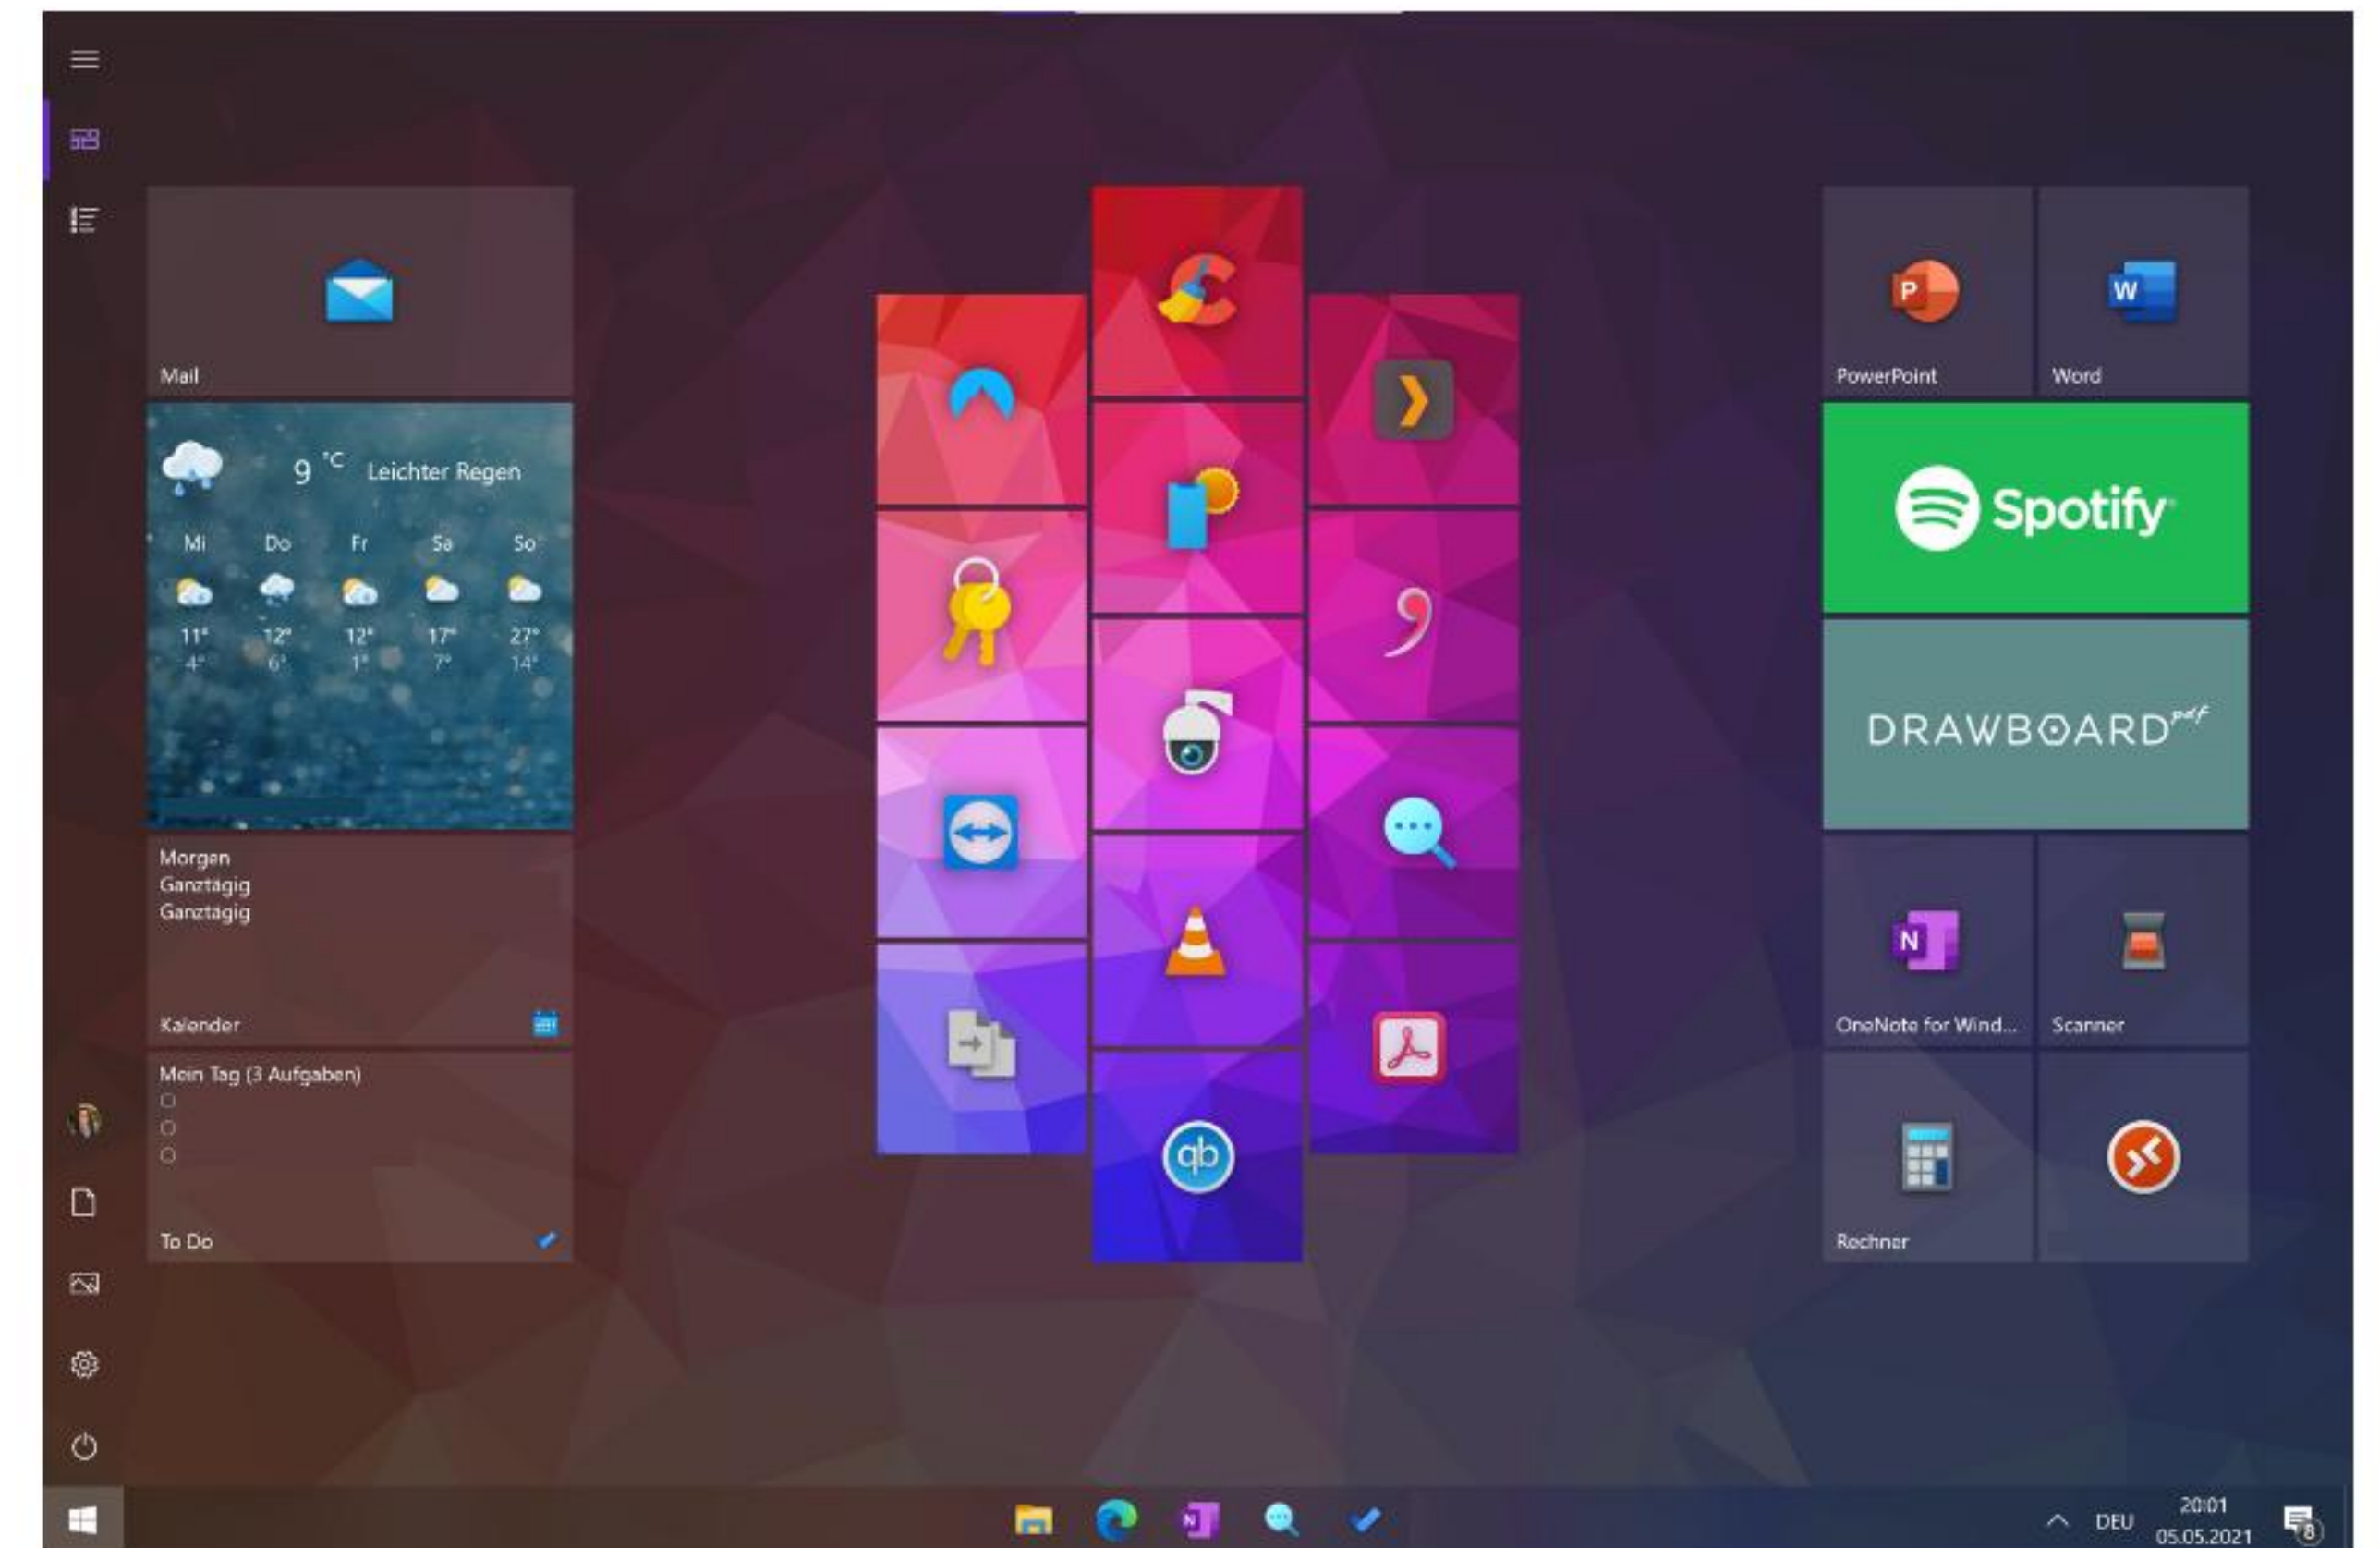

1. Open the **Recycle Bin**.
2. Right-click on the file you want back.
3. Select **Restore**. The file will jump right back to where it was originally saved!

Playing with Tiles

When you click the Start button, you see colorful squares and rectangles called **Tiles**. They are shortcuts to apps!

Tile Tricks:

- Right-click to **Resize** them (small to large).
- Click and drag to **Move** them anywhere.
- Drag a tile to an empty space to create and name a new **Group**!

Any Questions?

You are now a Computer Software expert!
