

Windows 10: Files & Folders

Class 4 Computer Science - Full Lesson & Quiz

1. The Desktop

- **Desktop:** The first screen that appears when a computer is switched on. It holds all your icons, files, and folders.
- **Wallpaper:** The beautiful picture displayed on the desktop background.
- **Taskbar:** The long horizontal line at the very bottom of the screen containing options and running apps.
- **Icons:** Small pictures on the screen that represent files, folders, or programs.

2. Personalizing the Desktop

Background

Right-click on a blank area and select **Personalize**. Choose a cool picture from the Background list box to set a new Wallpaper.

Color Scheme

The default color is Blue. You can change this in the Personalize window by clicking **Colors** and selecting your favorite accent color!

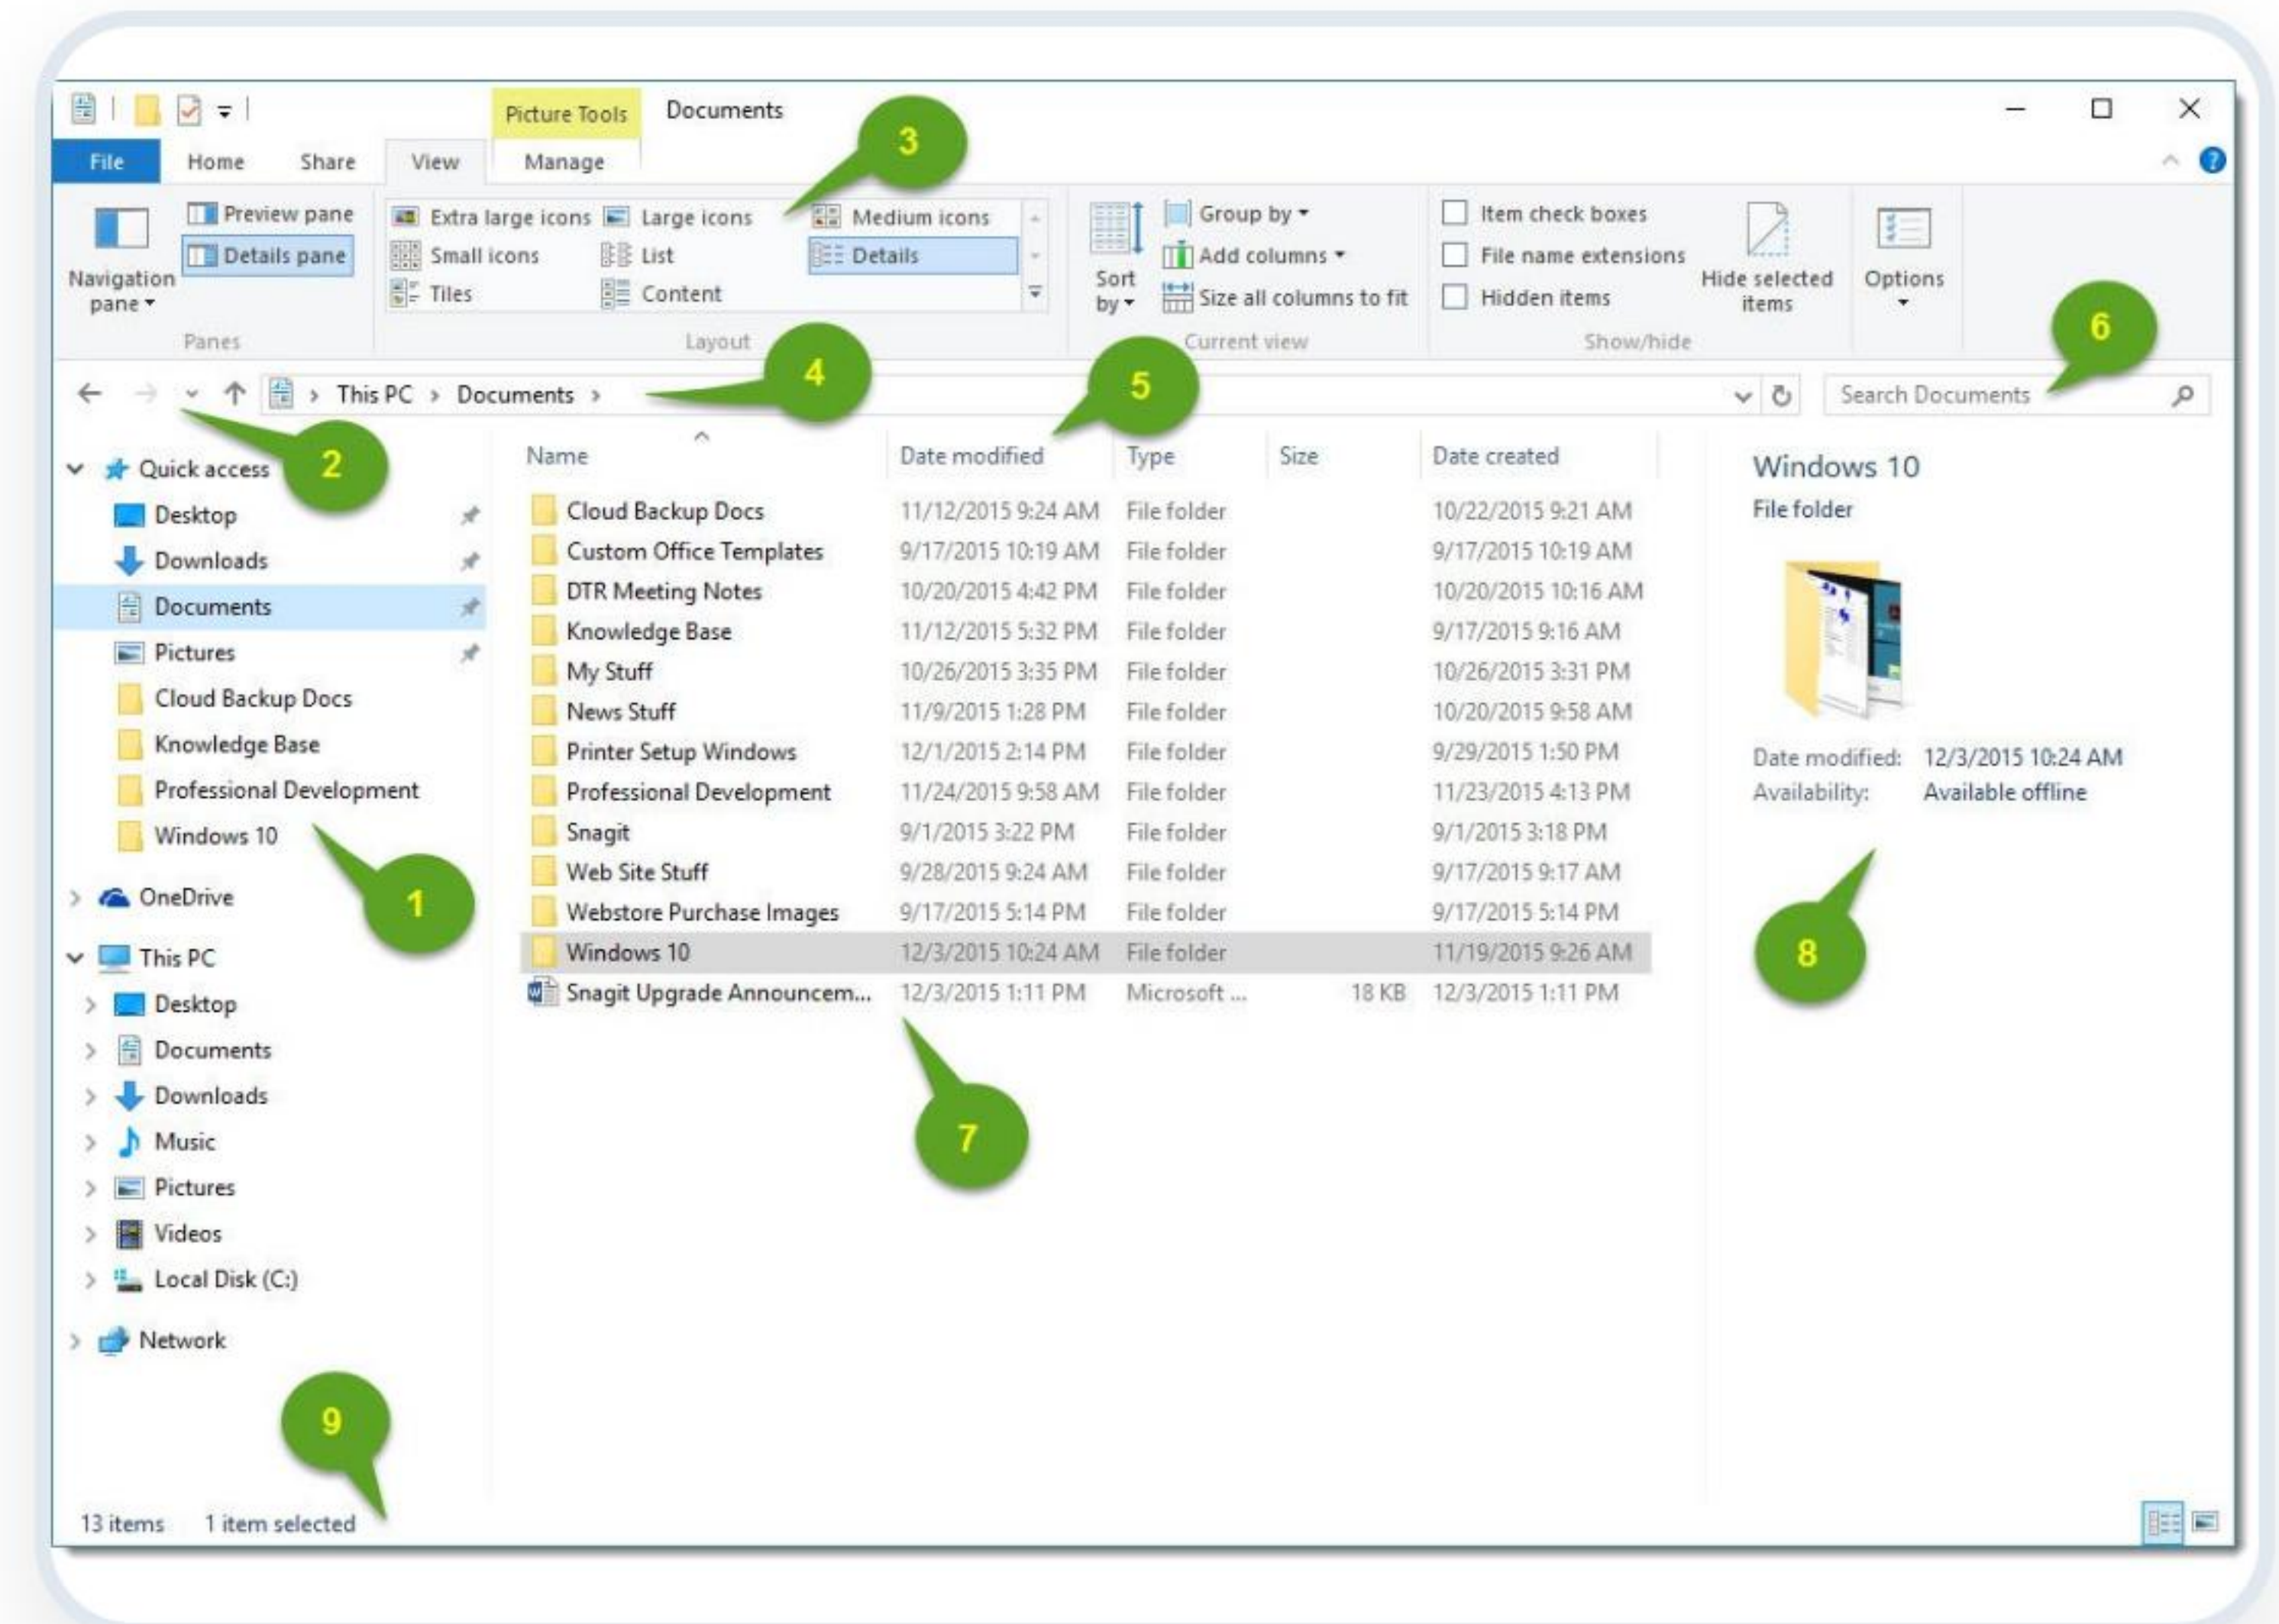

Arrange Icons

Right-click the desktop, go to **View**, and click **Auto arrange icons**. You can also hide icons to make a super clean screen.

3. File Explorer

File Explorer is the program used to view all the files, folders, and drives available in the computer.

- **Left Pane:** Shows a list of icons, files, and folders in a hierarchical (tree-like) format.
- **Right Pane:** Shows the exact contents of the folder or drive you have selected in the left pane.
- You can easily copy, move, delete, or create new folders here!

4. Working with Files & Folders

Create

A folder organizes your files. Right-click on a blank area, hover over **New**, and select **Folder**. Give it a descriptive name!

Rename

Made a typo? Right-click on a file or folder and click **Rename**. Type the new name and press the Enter key. Note: Two files can't have the same name!

Delete

Right-click and select **Delete**. It goes to the Recycle Bin. **Fact:** If you delete a file from the Recycle Bin, it cannot be retrieved!

5. Copy, Move & Shortcuts

Copy vs. Move

- **Copy:** Creates an exact duplicate. Use *Copy* and *Paste* commands.
- **Move:** Changes the location of a file. Use *Cut* and *Paste* commands.

Creating a Shortcut

A shortcut provides quick access to an application. It has a **small arrow** on its icon.

To create one, just drag an application from the Start menu onto the desktop!

6. User Accounts

Administrator

The controller of the entire computer system. They can grant privileges, install software, and change important system configurations.

Standard

Also known as an Interactive account. Users can access most systems but cannot make huge alterations like installing new programs.

Guest

Functions similar to a Standard account, but provides no privacy. Useful for letting someone temporarily borrow the computer.

Quiz Time!

Let's see how much you remember from the lesson.

Quiz Part 1: The Desktop

Question 1
